Click Delete video file confirm to delete the video file, you can choose to delete the current file or all files.

J. Audio output

As shown in the figure, click the [Audio Output] button to enter the audio output selection interface.

Car audio output: Click to enter, four options (speaker, Carplay/Auto, FM, AUX) can be selected.

1. BT

【 BT 】 : Select this mode, and then connect to **【 Apple CarPlay 】** or **【 Android Auto 】** to cast the screen, you can use the phone's Bluetooth to directly connect to the original car's Bluetooth. After the connection is successful, all sounds from the device will be transmitted to the original car speakers via Bluetooth.

After selecting this mode, the volume icon will change to the Bluetooth transmission icon

【BT】 Select this mode Click **【 OK 】** to confirm switching from other sound output mode to BT output or switching from BT output mode to other sound output mode when connecting **【 Apple CarPlay 】** or **【 Android Auto 】** Auto will be briefly disconnected before reconnecting, and the volume cannot be adjusted on this device, so the volume must be adjusted on the original car.

Requirements:

1. The car supports Bluetooth.
2. Only iPhone and Android Auto enabled phones are supported Advantages of BT for Carplay feature:

In this mode, the user does not need to set the audio output channel on the mobile phone to the original car Bluetooth device every time after getting in the car. The sound is directly

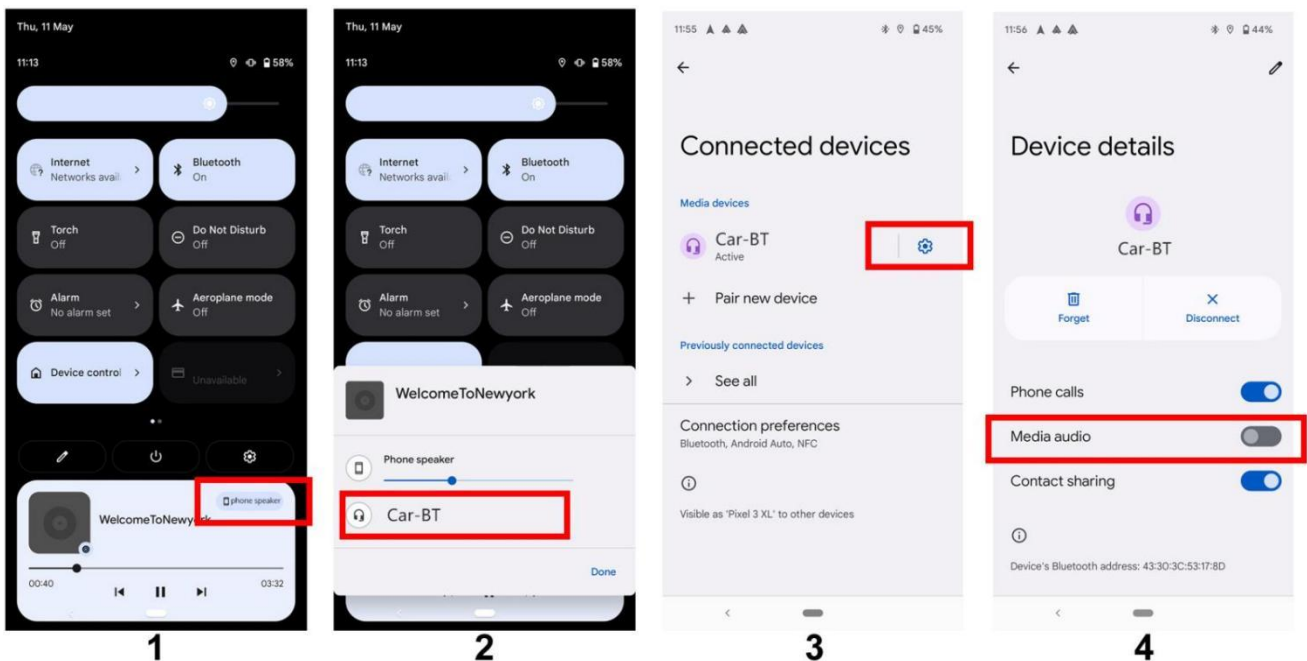

sent from the mobile phone to the Bluetooth of the original car, and you can enjoy the sound quality of the original car.

BT for Carplay usage steps:

- ① Select **【BT for carplay/Auto】** mode in [Audio Channel] on the smart screen.
- ② Connect to Apple Carplay or Android Auto mode with your phone.
- ③ Connect the Bluetooth of the original car with the Bluetooth of the mobile phone.

After completing the above 3 steps, the audio or call data can be played from the original car stereo.

Other instructions:

After completing the above three steps on the Android phone, if the music is still playing from the phone, you need to open the phone status bar and switch the audio output channel to the car Bluetooth playback, as shown in Figure 1 and Figure 2:

Alternatively, in the Bluetooth settings of the phone, locate the Bluetooth device that was previously connected to Android Auto: T93-XXXXXX (not the original car Bluetooth device), click the settings button on the right side of the Bluetooth, and close the [Media Audio] button, as shown in Figures 3 and 4:

2. AUX IN

【AUX IN】 : After selecting this mode, the AUX output mode will be turned on by default.

Use the AUX sound source cable to connect the smart screen to the original car. After the connection is successful, all the sounds of the device will be transmitted to the original car speakers through the AUX sound source cable for playback.

After selecting this mode, the volume icon will change to the AUX output icon **【 OK 】** , and the volume cannot be adjusted on this device, so the volume must be adjusted on the original car.

3. Loudspeaker

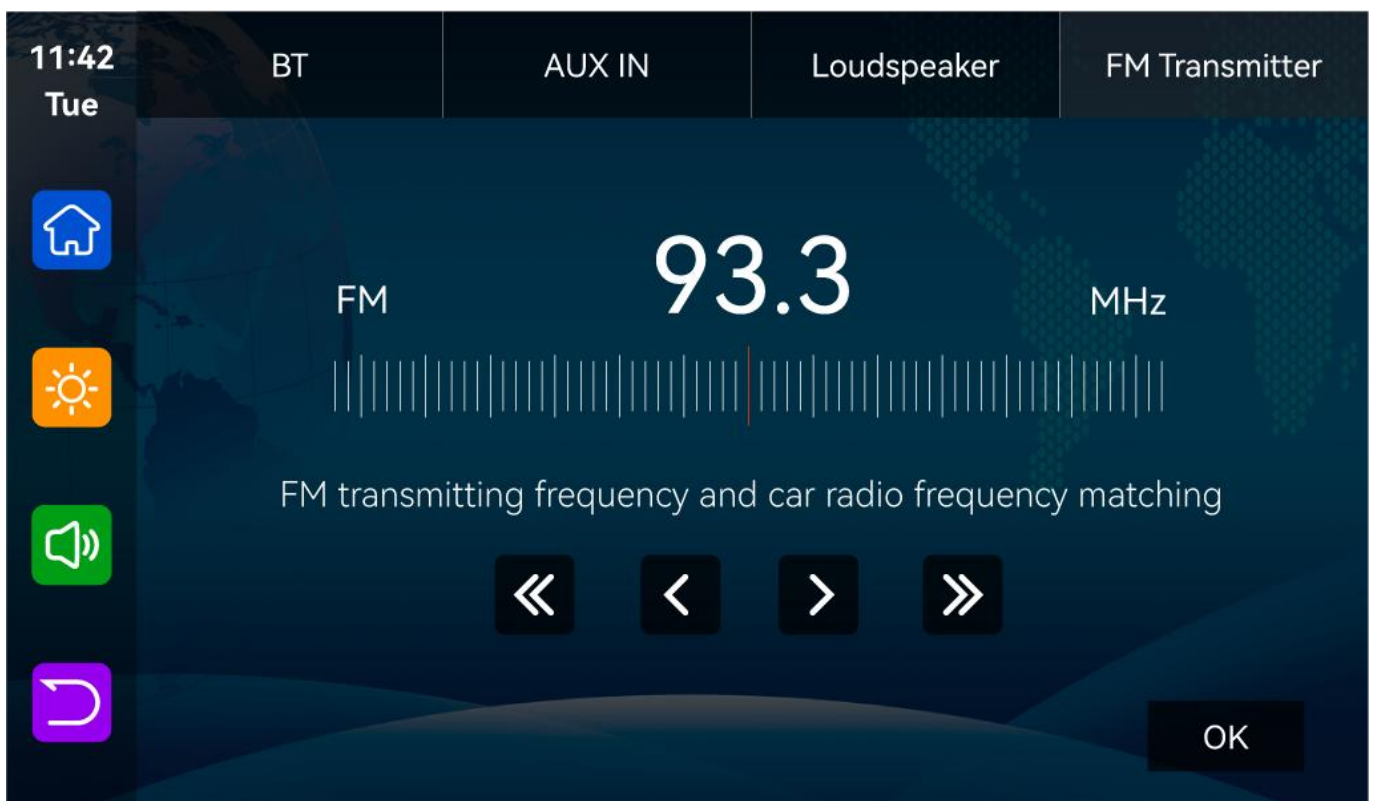

【 loudspeaker 】 Select this mode and click **【 OK 】** button to confirm.

【Loudspeaker】 : The sound will be played from the speaker of the smart screen.

4.FM Transmitter

After selecting this mode, click 【 OK 】 button to confirm .the FM transmission mode will be turned on by default. For example, if the device's FM transmit band is tuned to FM 93.3 MHz (any unoccupied channel can be used), the car radio will also tune its receive band to the same FM 93.3 Hz. After the connection is successful, all the sounds of the device will be transmitted to the original car speakers through FM transmission.

After selecting this mode, the volume icon will change to an FM transmission icon 【 FM 】 , and the volume cannot be adjusted on this device, so the volume must be adjusted on the original car.

(Not using the original power cord may result in deterioration of the FM transmission signal or loss of function.)

K. Apple Airplay

Apple AirPlay can transmit videos, audio and pictures from iPhone to car device to play to watch. It is fundamentally different from the Bluetooth wireless.

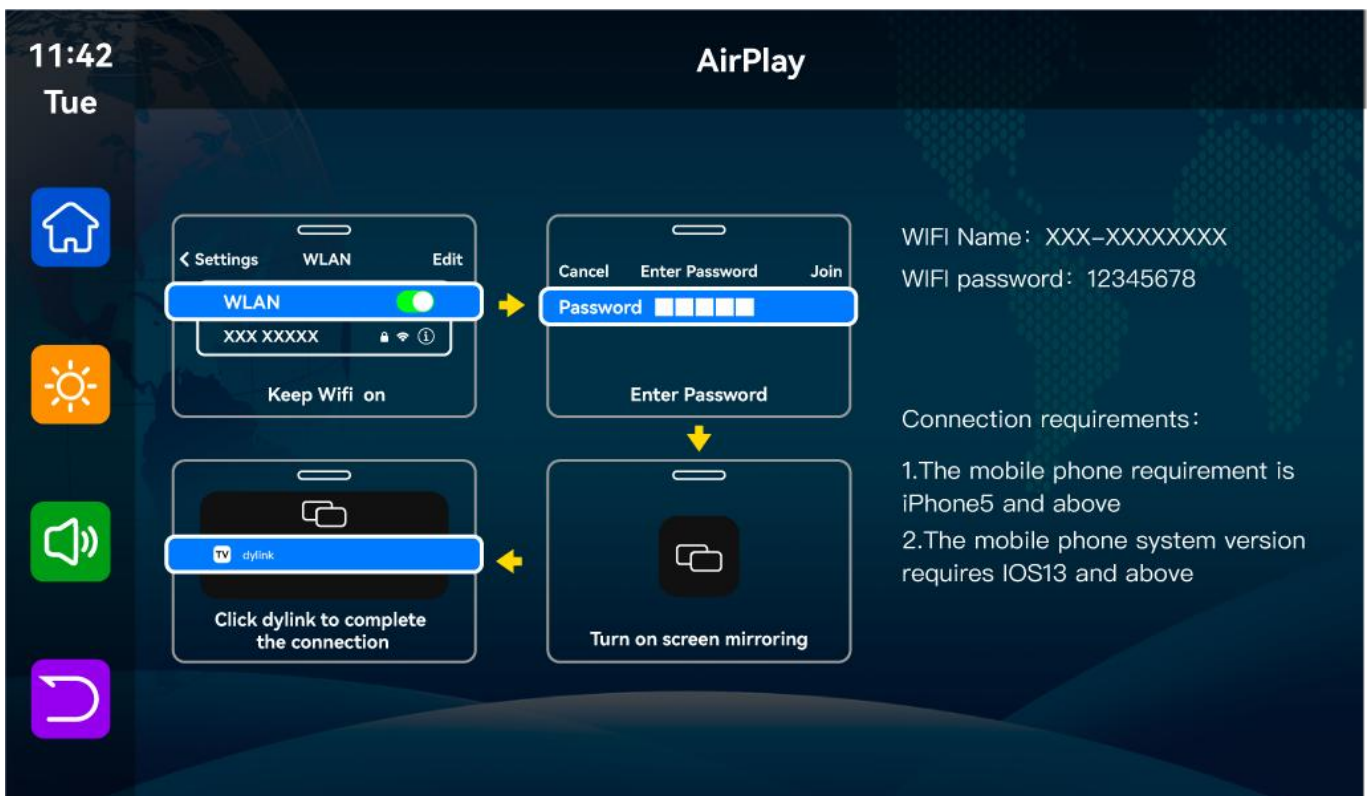

The transmission carrier is WIFI.

Need iPhone connection to wifi

Select the smart screen in the screen mirror in the iPhone control center

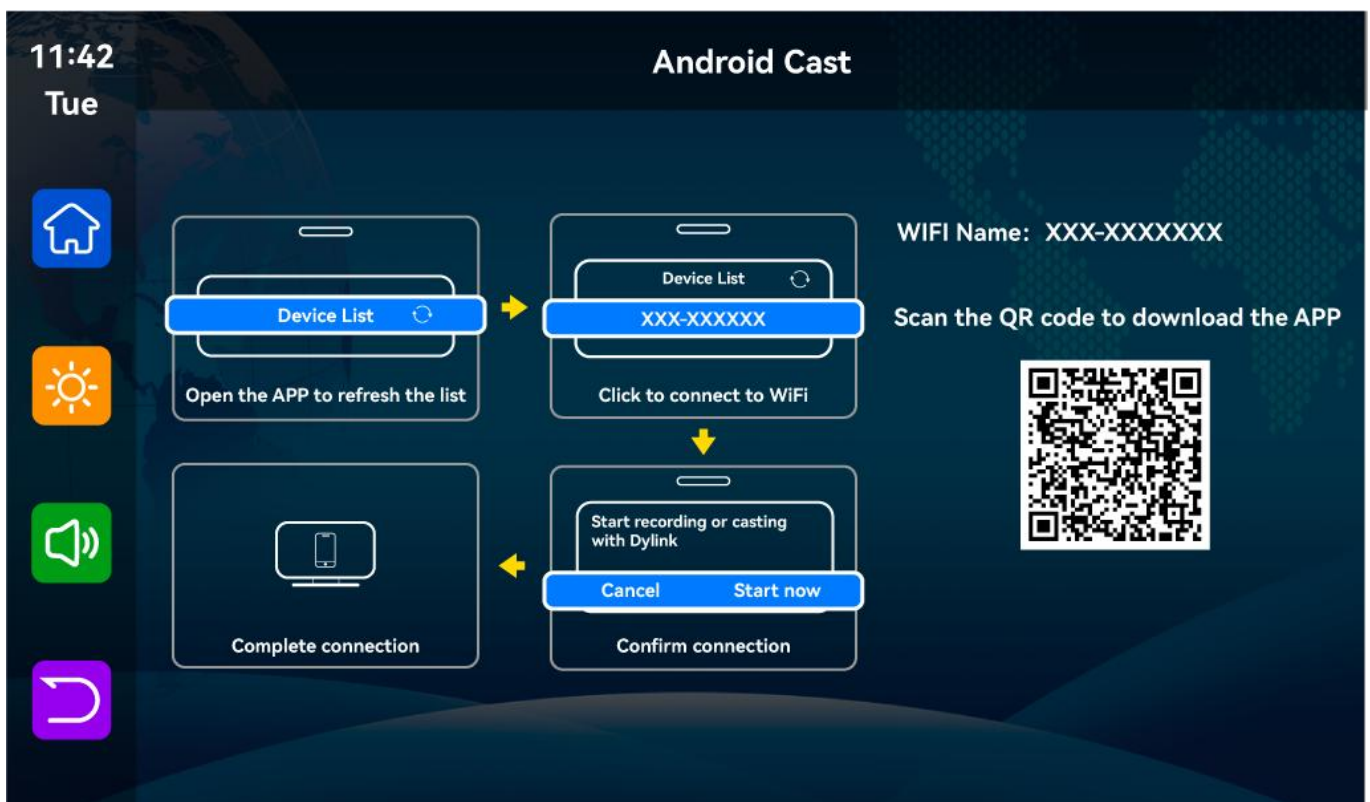

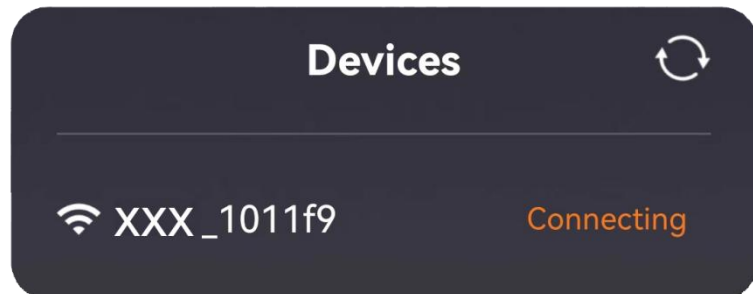

Note: Only support iPhone mobile phones

L. Android Cast

It can realize the mirror projection of the mobile phone and the car machine.

You need to scan the code with your mobile phone to download, install and run the "Dylink" application.

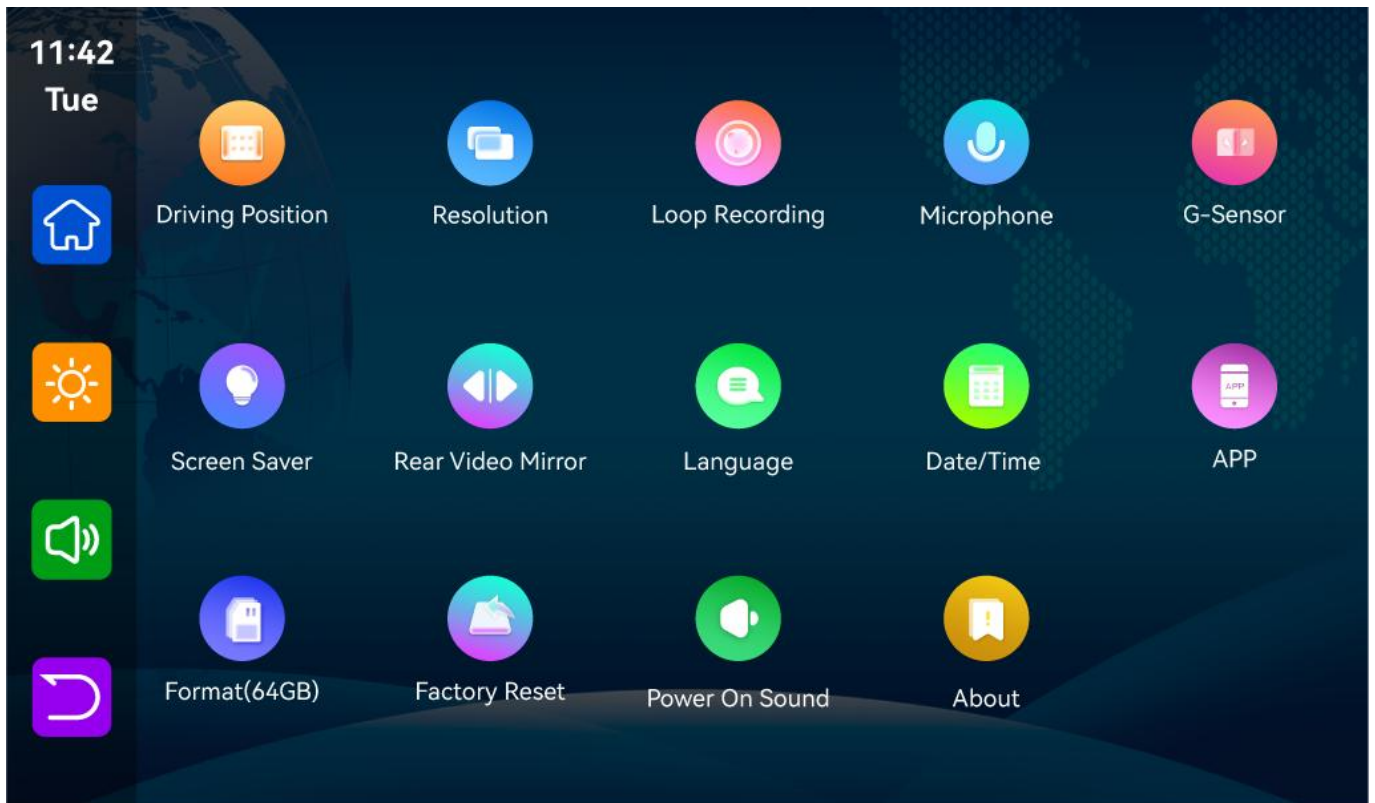

Note: Only supports Android phones

1.APP

As shown in the figure above, first scan the QR code to download the corresponding APP. After downloading, open the APP, and follow the APP prompts to connect to the WiFi of the machine. WiFi name: T93-XXXXXX, password as shown on the machine.

(Turn off the mobile phone WiFi key to disconnect)

After the mobile phone has downloaded the APP, turn on the WIFI function of the mobile phone, connect to the hotspot name displayed on the machine side, enter the password 12345678, and wait for the mobile phone and the machine to connect successfully. Open the mobile side APP [Viidure] and click the camera position below. The mobile phone will display the camera preview screen on the machine, and the machine will close any operation and only display the camera preview screen.

2. Wiring and installation of rear pull camera

The installation method of the rear camera is different according to the installation position. Please confirm the installation position before selecting the appropriate installation method.

After confirming the installation position, clean up the oil and dust on the surface of the installation position. If the sticking is not firm, the rear camera may fall off during driving.

It is recommended that the rear camera is installed outside the car for better results. This camera is waterproof, so you don't need to worry about it.

In order to drive safely, please route the wires so as not to hinder driving.

After the vehicle is in reverse gear, the recorder image will automatically switch to the rear camera and display the reverse auxiliary line. After the reverse gear is exited, the device will return to the normal display state.

Installation of the rear camera

Although the distance sensing guide line behind the vehicle is displayed in the image of the rear camera, all dangerous obstacles cannot be displayed. Do not just look at the reversing image on the screen and check the rear visually.

Reverse Line Calibration

Park the car in the middle of the parking space, after the vehicle is attached to the reverse gear, when the rear camera preview picture is out of the reverse auxiliary line, manually drag the four corners of the reverse auxiliary line, adjust the position of the reverse car, the reverse auxiliary line, the bottom, and the left and right, so that the reverse auxiliary line and the parking line are flat with the ground

L.Troubleshooting

Item	Problem	Solution
1	Unable to start DVR supports 12~24V car use	<ol style="list-style-type: none">1) Check whether the DC head of the cigarette lighter power cord is damaged or aging.2) Check whether the fuse of the power plug is disconnected or burned.
2	No touch phenomenon	<ol style="list-style-type: none">1) Touch is invalid during power-on, wait for normal power-on before operation.2) Check whether the touch is damaged, do not touch the screen with sharp objects, it is easy to scratch and damage.
3	The rear view camera has no image	<ol style="list-style-type: none">1) Buy the manufacturer's matching rear-view camera before it can be used..2) Whether the AVIN interface is inserted to the bottom.3) Check if the camera format matches
4	Carplay cannot connect	<ol style="list-style-type: none">1) The first connection takes a little longer.2) Only iPhone supports Carplay.3) Check that the WiFi and Bluetooth functions of the mobile phone are normal.4) Enter Settings-General-Carplay vehicle, delete all records and reconnect.5) Restart the iPhone and reconnect it.
5	Android Auto cannot connect	<ol style="list-style-type: none">1) Only Android phones are supported.2) Update Auto and related applications on mobile phones to the latest version.3) Check that the WiFi and Bluetooth functions of the mobile phone are normal.4) Restart the Android phone and connect it again.

Reminder: Please ensure that there is no obstruction between the mobile phone and the device, and the Wi-Fi / Bluetooth signal communication is smooth, otherwise the product functions cannot be used smoothly.
